## Polyurethane Systems

**High-end Italian Finishes** • The first full line of European technology produced in North America, ora Verde®, is designed to meet all your high-end finish needs. Now you can have the best of both worlds - top Italian formulations produced here for assurance in meeting North American compliancy standards.

### ● Verde Chiaro

Chiaro is an ultra clear polyurethane formula. This one is highly versatile, with excellent physical properties and chemical resistance. Extremely durable with a great finish feel. Clears are available in all finishes from matte finish to ultra high gloss.

### ● Verde Bianco

In addition to a great finish look and feel, these white topcoats provide excellent resistance to marring and impact. Pigmented, high solid polyurethane primers will sand very well. The Bianco line is designed to accept tints to meet your color needs, and is available in low satin to ultra high gloss.

### ● Verde Acrilico

Formulated with crystal clarity and virtually no discoloration, Acrilico takes acrylic polyurethane coatings to a new level. It looks great as an open pore finish, making it ideal for the high-end kitchen cabinet industry. The Acrilico line provides superior surface resistance, and is available in low satin to high gloss.

### ● Verde Poliesteri

Poliesteri is a high build polyester sealer, formulated for quick build to achieve full, filled finishes. Performs great in both horizontal and vertical applications. Using state-of-the-art European technology, these polyester topcoats will provide minimal shrinkage. Designed for durability to provide an excellent surface for buffing and polishing.

### ● Promatch™ Aqua

A complete line of waterborne stains that allow intermixing to desired transparent colors. Eleven stock mono colors in an intermix system using Nano technology will meet all your color needs. Also available in standard colors.

These colors can be used under all Chemcraft® systems.

For additional information refer to the individual product sheets.
