

09-13-10

To our valued ATD distributors and customers,

This letter is to inform you that all ATD HVLP guns are designed to comply with all government regulations regarding high volume, low pressure spray guns.

Our HVLP guns are designed to not exceed 10 PSIG air cap pressure (measured dynamically at the air cap center and horn) at the specified gun inlet pressure.

All ATD HVLP spray guns are capable of achieving 65% transfer efficiency.

If you have any questions concerning any code compliance issues, please contact your ATD distributor for more information.

Thank you,

Jon Lovetto
Customer Service / Parts Manager
ATD Tools, Inc.
